

I-LITE, 8.0 WATT LED DRIVER

(Common-Cathode, One to Six Channels)

GENERAL DESCRIPTION

The ACI-A038040-2003 is designed to drive up to 6 parallel channels of series connected LEDs.

The number of channels and current per channel are configurable per Table 1 on Page 3, by setting a four-position switch located on the driver, enabling the driver to support a wide range of displays.

Operating as a true constant current source, the driver provides a complete integrated solution that operates from a nominal +8 to +18 VDC source.

This unit features enable and intensity control inputs and is designed to work with the Digital View LCD Controller and Button Board (see page 4 for more information).

TABLE1. – Output Current per Channel, based on Switch (S1) Setting and Number of Channels Connected.

The Nominal Input Current Draw, based on Vin, can be calculated from the following equation:

$$\text{Nominal Input Current Draw (A)} = \frac{\text{Iout per Channel (mA)} \times \text{Number of Channels} \times \text{Vf (V)} \times 0.0011}{\text{Vin (V)}}$$

NOTE: The intensity response curve is designed to be compatible with the Digital View LCD Controller and Button Board.
