1. Application

This specification applies to the color 46.0” TFT-LCD module LK460D3LA63

* These specification are proprietary products of SHARP CORPORATION (“SHARP”) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

* In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

* Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.

* SHARP assumes no responsibility for any damage resulting from the use of the device that does not comply with the instructions and the precautions specified in these specification.

* Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, and edge-lit LED backlight system etc. Graphics and texts can be displayed on a 1920×RGB×1080 dots panel with one billion colors (RGB 10bits) by using LVDS (Low Voltage Differential Signaling) to interface, +12V of DC supply voltages.

And in order to improve the response time of LCD, this module applies the Over Shoot driving (O/S driving) technology for the control circuit. In the O/S driving technology, signals are being applied to the Liquid Crystal according to a pre-fixed process as an image signal of the present frame when a difference is found between image signal of the previous frame and that of the current frame after comparing them.

With this technology, image signals can be set so that liquid crystal response completes within one frame. As a result, motion blur reduces and clearer display performance can be realized.

This LCD module also adopts Double Frame Rate driving method.

With combination of these technologies, motion blur can be reduced and clearer display performance can be realized.

3. Mechanical Specifications

Parameter	Specifications	Unit
Display size	116.8 （Diagonal）	cm
	46.0 （Diagonal）	inch
Active area	1018.08 (H) x 572.67 (V)	mm
Pixel Format	1920(H) x 1080(V) （1pixel = R + G + B dot）	pixel
Pixel pitch	0.53025 (H) x 0.53025 (V)	mm
Pixel configuration	R, G, B vertical stripe	
Display mode	Normally black	
Unit Outline Dimensions (*1)	1065.9 (W) x 617.4 (H) x 28.6 (D)(max)	mm
Mass	10.2±1.0	kg
Surface treatment	Low-Haze Anti Glare Hard coating: 3H Haze value: 8%(typ)	

(*1) Outline is shown in Fig.1

4. Input Terminals

4.1. TFT panel driving

CN1 (Interface signals and +12V DC power supply)

Using connector : FI-RE51S-HF (Japan Aviation Electronics Ind., Ltd.)

Mating connector : FI-RE51HL, FI-RE51CL (Japan Aviation Electronics Ind., Ltd.)

Mating LVDS transmitter : THC63LVD1023 or equivalent device

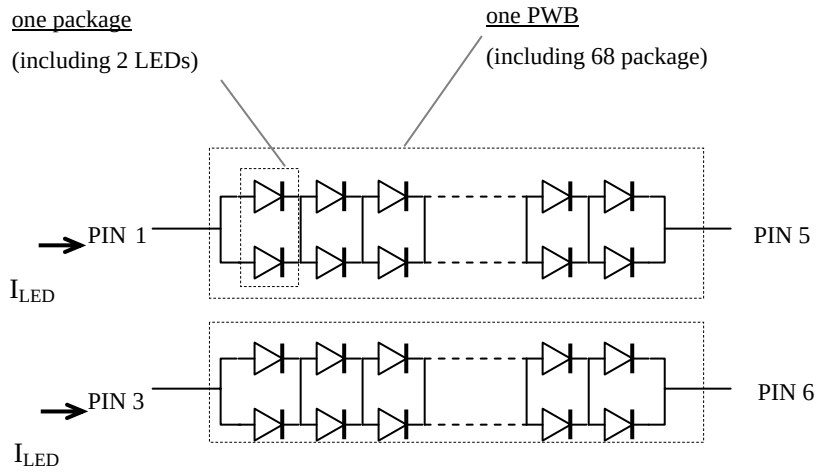
CN102 side cable lengths (from Panel backplate opening to including connector head) L=350mm(typ)

* Equivalent Circuit of LED PWB (This circuit is common in both side.)



4.4 The back light system characteristics

The back light system is side-edge-lit type with LED. (Die/package: 2/ 68package)

The characteristics of the LED are shown in the following table.

Item	Symbol	Min.	Typ.	Max.	Unit	Remarks
Life time	T_{LED}	30000	50000	-	Hour	[Note]

[Note] LED life time is defined as the time when brightness becomes 50% of the original value in the continuous operation.

[Operation condition]

ambient temperature Ta=25℃,

I_F = 0.120A (each LED PWB), using heat radiation system on the backside module

* Under such a condition, please keep 85.0℃ or less the temperature of the terminal of LED.

5. Absolute Maximum Ratings

Parameter	Symbol	Condition	Ratings	Unit	Remark
Input voltage (for Control PWB)	V_I	Ta=25 °C	-0.3 ~ 3.6	V	[Note 1]
12V supply voltage (for Control PWB)	VCC	Ta=25 °C	0 ~ + 14	V	
Reverse voltage for LED-PWB	V_{LED}	Ta=25 °C	5	V	Each LED 1 piece
Forward Current for LED-PWB	I_{LED}	Ta=25 °C	150	mA	[Note 3]
Reverse Current for LED-PWB	I_{LED}	Ta=25 °C	10	μA	[Note 3]
Storage temperature	Tstg	-	-25 ~ +60	°C	[Note 2]
Operation temperature (Ambient)	Topa	-	0 ~ +50	°C	

[Note 1] SELLVDS, FRAME, O/S_set, R/L, U/D

[Note 2] Humidity 95%RH Max.(Ta≦40°C)

Maximum wet-bulb temperature at 39 °C or less.(Ta>40°C)

No condensation.

[Note 3] PIN1, PIN3 (CN101, CN102)

6. Electrical Characteristics

6.1. Control circuit driving

Ta=25 °C

Parameter		Symbol	Min.	Typ.	Max.	Unit	Remark
+12V supply voltage	Supply voltage	Vcc	11.4	12	12.6	V	[Note 1]
	Current dissipation	Icc	-	0.5	1.8	A	[Note 2]
	Inrush current	I_{RUSH}	-	3.0	5.0	A	t1=1ms [Note 7]
Permissible input ripple voltage		V_{RP}	-	-	100	mV_{P-P}	Vcc = +12.0V
Differential input threshold voltage	High	V_{TH}	-	-	100	mV	V_{CM} = +1.2V [Note 6]
	Low	V_{TL}	-100	-	-	mV	
Input Low voltage		V_{IL}	0	-	1.0	V	[Note 3]
Input High voltage		V_{IH}	2.3	-	3.3	V	
Input leak current (Low)		I_{IL1}	-	-	400	μA	V_I = 0V [Note 4]
		I_{IL2}	-	-	40	μA	V_I = 0V [Note 5]
Input leak current (High)		I_{IH1}	-	-	40	μA	V_I = 3.3V [Note 4]
		I_{IH2}	-	-	400	μA	V_I = 3.3V [Note 5]
Terminal resistor		R_T	-	100	-	Ω	Differential input

[Note]V_{CM}: Common mode voltage of LVDS driver.

[Note 1]

Input voltage sequences

0 < t1 ≦ 20ms

10 < t2 ≦ 20ms

10 < t3 ≦ 50ms

0 < t4 ≦ 1s

t5 ≧ 1s

t6 ≧ 0

t7 ≧ 300ms

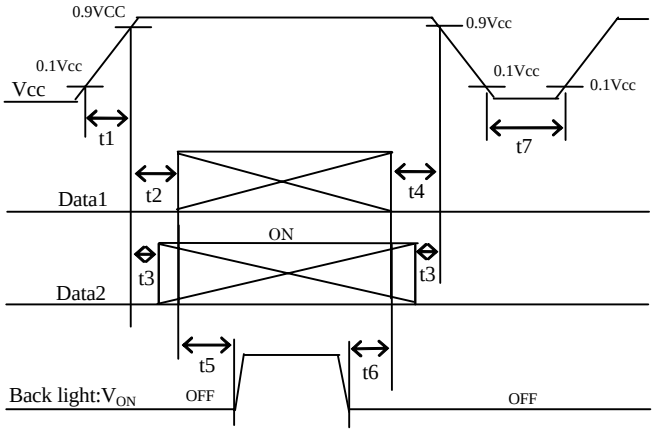
Dip conditions for supply voltage

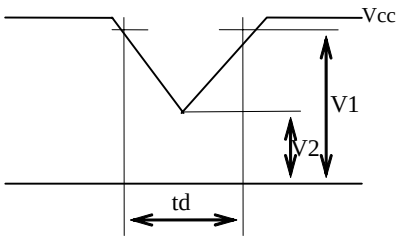
a) 6.5V ≦ Vcc < 10.8V

td ≦ 10ms

b) Vcc < 6.5V

Dip conditions for supply voltage is based on input voltage sequence.





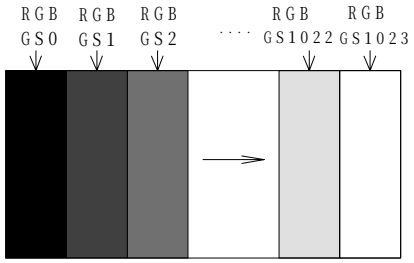
V1:10.8V
V2:6.5V

※ Data1: ACK±, AIN0±, AIN1±, AIN2±, AIN3±, AIN4±,BCK±, BIN0±, BIN1±, BIN2±, BIN3±, BIN4±
*V_{CM} voltage pursues the sequence mentioned above

※ Data2: SELLVDS, FRAME, O/S_SET, R/L, U/D

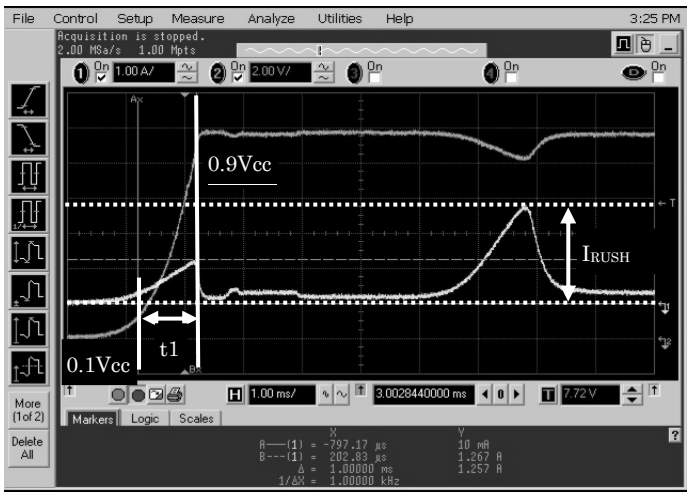
[Note]About the relation between data input and back light lighting, please base on the above-mentioned input sequence. When back light is switched on before panel operation or after a panel operation stop, it may not display normally. But this phenomenon is not based on change of an incoming signal, and does not give damage to a liquid crystal display.

[Note 2] Typical current situation: 1024 gray-bar patterns. (Vcc = +12.0V)
The explanation of RGB gray scale is seen in section 8.



Vcc＝+12.0V
CK＝74.25MHz
Th＝7.41μs

[Note 3] SELLVDS, FRAME, O/S_SET, R/L, U/D
[Note 4] O/S_SET
[Note 5] FRAME, SELLVDS
[Note 6] ACK±, AIN0±, AIN1±, AIN2±, AIN3±, AIN4±,BCK±, BIN0±, BIN1±, BIN2±, BIN3±, BIN4±
[Note 7] Vcc12V inrush current waveform (This figure is I_{RUSH}：t1=1ms)



6.2. LED driving for back light

Ta=25℃

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
LED Current	I_{LED}	112.8	120	127.2	mA	The value of each bar [Note 1]
LED Voltage	V_F	227.0	241.4	255.8	V	I_{LED} =120mA [Note2]
PWM dimming frequency	f_{PWM}	95	-	370	Hz	
PWM dimming on duty	PWM duty	10	-	100	%	

[Note1] PIN1, PIN3 (CN101, CN102)

*Please decrease LED heat enough when the LED current is increased more than TYP value.
please keep 85.0℃ or less the temperature of the terminal of LED.

[Note2] Ta = 25℃, Measurement after 100ms has passed since power supply was turned on.

*The products are sensitive to the static electricity and care shall be fully taken when handling the products. Particularly in case that an over-voltage which exceeds the Absolute Maximum Rating of the products shall be applied, the overflowed energy may cause damages to, or possibly result in destruction of the products. Please take absolutely secured countermeasures against static electricity and surge when handling the products.

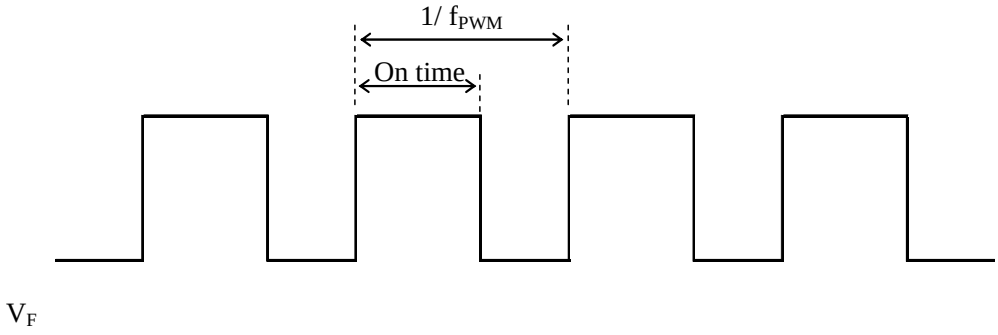


Fig.1 LED Backlight PWM0

7 Timing characteristics of input signals

Timing characteristics

Timing diagrams of input signal are shown in Fig.2.

Parameter		Symbol	Min.	Typ.	Max.	Unit	Remark
Clock	Frequency	1/Tc	55	74.25	80	MHz	
Data enable signal	Horizontal period	TH	515	550	825	Clock	
			7.1	7.41	11.1	μs	
	Horizontal period (High)	THd	480	480	480	Clock	
	Vertical period	TV	1120	1125	1400	Line	
			73.052	120	120.64	Hz	
	Vertical period (High)	TVd	1080	1080	1080	line	

[Note]-When vertical period is very long, flicker and etc. may occur.

-Please turn off the module after it shows the black screen.

-Please make sure that length of vertical period should become of an integral multiple of horizontal length of period. Otherwise, the screen may not display properly.

-As for your final setting of driving timing, we will conduct operation check test at our side, please inform your final setting.

0: Low level voltage, 1: High level voltage.

Each basic color can be displayed in 1024 gray scales from 10 bits data signals. According to the combination of total 30 bits data signals, one billion-color display can be achieved on the screen.

9 Optical characteristics

Ta=25°C, Vcc=12.0V, V_{LED} =(241.4V) frame rate:120Hz (typ.value)

Parameter		Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Viewing angle range	Horizontal	θ21 θ22	CR≧100	70	88	-	Deg.	[Note1,4]
	Vertical	θ11 θ12		70	88	-	Deg.	
Contrast ratio		CRn	θ=0 deg.	3750	5000	-		[Note2,4]
Response time		τ_{DRV}		-	6	8	ms	[Note3,4,5]
Chromaticity	White	x		0.248	0.278	0.308	-	I_{LED}=0.12A [Note4]
		y		0.255	0.285	0.315	-	
	Red	x		0.618	0.648	0.678	-	
		y		0.311	0.341	0.371	-	
	Green	x		0.271	0.301	0.331	-	
		y		0.614	0.644	0.674	-	
	Blue	x		0.118	0.148	0.178	-	
		y		0.034	0.064	0.094	-	
Luminance	White	Y_L		400	450	-	cd/m^2	
Luminance uniformity	White	δw				1.25		[Note 6]
	Black	δb				1.75		[Note 6]

Measurement condition

*The measurement shall be executed 60 minutes after lighting at rating.

[Note]The optical characteristics are measured using the following equipment.

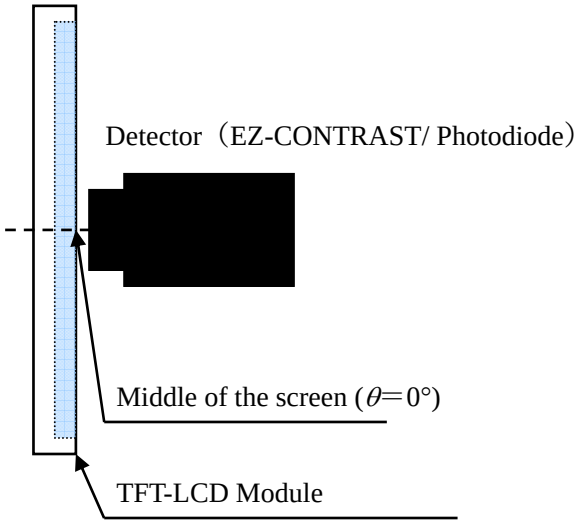

Fig.4-1 Measurement of viewing angle range and Response time.
Viewing angle range: EZ-CONTRAST
Response time: Photodiode

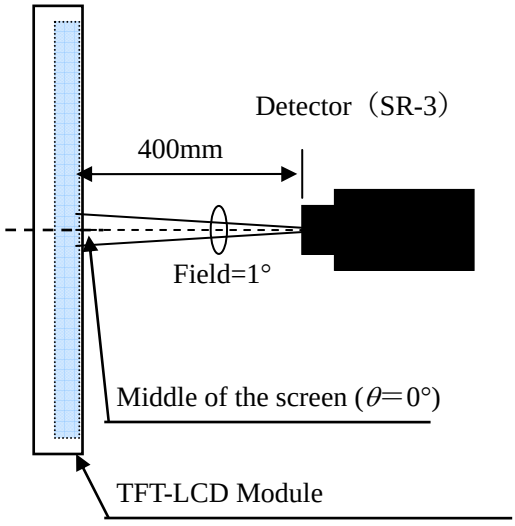

Fig.4-2 Measurement of Contrast, Luminance, Chromaticity.

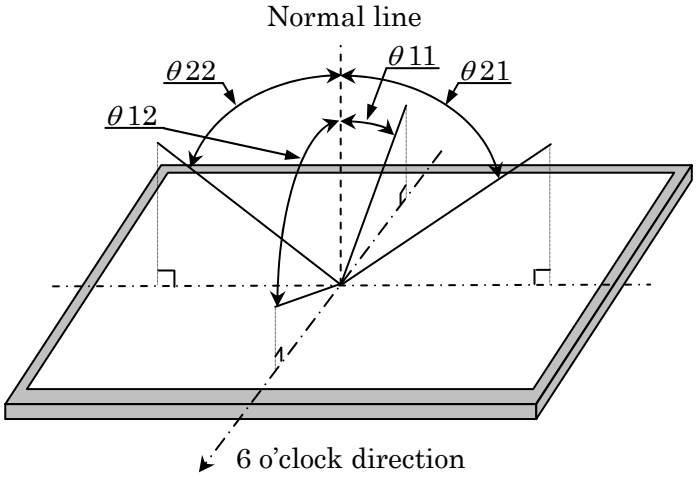
[Note 1]Definitions of viewing angle range :



[Note 2]Definition of contrast ratio :

The contrast ratio is defined as the following.

$$\text{Contrast Ratio} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

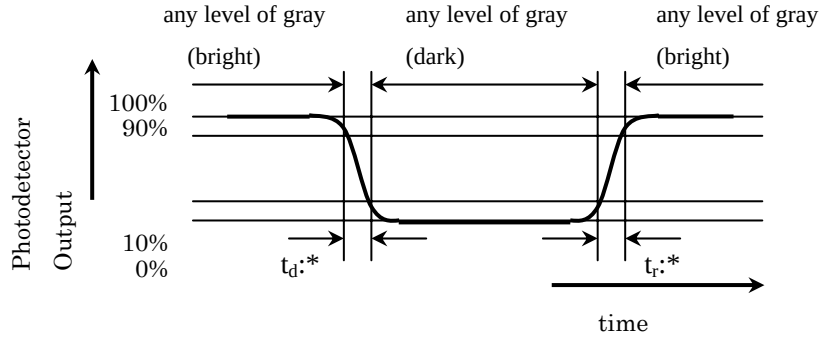
[Note 3]Definition of response time

The response time (T_{DRV})) is defined as the following figure and shall be measured by switching the input signal for "any level of gray (0%, 25%, 50%, 75% and 100%)" and "any level of gray (0%, 25%, 50%, 75% and 100%)".

	0%	25%	50%	75%	100%
0%		tr:0%-25%	tr:0%-50%	tr:0%-75%	tr:0%-100%
25%	td: 25%-0%		tr: 25%-50%	tr25%-75%	tr: 25%-100%
50%	td: 50%-0%	td: 50%-25%		tr: 50%-75%	tr: 50%-100%
75%	td: 75%-0%	td: 75%-25%	td: 75%-50%		tr: 75%-100%
100%	td: 100%-0%	td: 100%-25%	td: 100%-50%	td:100%-75%	

t*:x-y...response time from level of gray(x) to level of gray(y)

$\tau_{DRV} = \Sigma(t^*:x\text{-}y)/20$



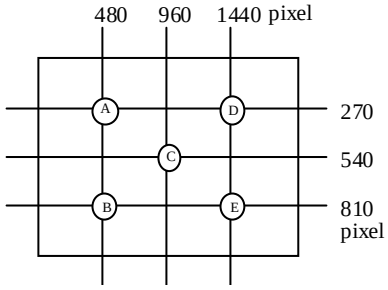
[Note 4]This shall be measured at center of the screen.

[Note 5] This value is valid when O/S driving is used at typical input time value.

[Note 6]Definition of white uniformity ;

White uniformity is defined as the following with five measurements. (A~E)

$$\delta W = \frac{\text{Maximum luminance of five points (brightness)}}{\text{Minimum luminance of five points (brightness)}}$$



10 Precautions

10.1. Fail safe design

LCD Module has an inherent chance of failure. Customers must protect against injury, damage or less from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

10.2. Handling Precautions of the module

a) Be sure to turn off the power supply when inserting or disconnecting the cable.

b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.

c) Since the front polarizer is easily damaged, pay attention not to scratch it.

d) Since long contact with water may cause discoloration or spots, wipe off water drop immediately.

e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.

f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.

g) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.

h) The module has some printed circuit boards (PCBs) on the back side, take care to keep them form any stress or pressure when handling or installing the module; otherwise some of electronic parts on the PCBs may be damaged.

i) Observe all other precautionary requirements in handling components.

j) When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issue, functional defect, etc. So, please avoid such design.

k) When giving a touch to the panel at power on supply, it may cause some kinds of degradation. In that case, once turn off the power supply, and turn on after several seconds again, and that is disappear.

l) When handling LCD modules and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.

m) This LCD module is designed to prevent dust from entering into it. However, there would be a possibility to have a bad effect on display performance in case of having dust inside of LCD module. Therefore, please ensure to design your TV set to keep dust away around LCD module.

11 Packing form

a) Piling number of cartons : 4 maximum
b) Packing quantity in one carton : 16 pcs
c) Carton size : 1195(W)×1140(H)×834(D)mm
d) Total mass of one carton filled with full modules : 193.7kg

12 Reliability test item

No.	Test item	Condition
1	High temperature storage test	Ta=60°C 240h
2	Low temperature storage test	Ta=-25°C 240h
3	High temperature and high humidity operation test	Ta=40°C ; 95%RH 240h (No condensation)
4	High temperature operation test	Ta=50°C 240h
5	Low temperature operation test	Ta=0°C 240h
6	Vibration test (non-operation)	Frequency: 10~57Hz/Vibration width (one side): 0.075mm : 58~500Hz/Acceleration: 9.8 m/s² Sweep time: 11 minutes Test period: 3 hours (1h for each direction of X, Y, Z)
7	Shock test (non-operation)	Maximum acceleration: (294m/s^2) Pulse width: 11ms, sinusoidal half wave Direction: +/-X, +/-Y, +/-Z, once for each direction.
8	ESD	* At the following conditions, it is a thing without incorrect operation and destruction. (1)Non-operation: Contact electric discharge ±10kV Non-contact electric discharge ±20kV (2)Operation Contact electric discharge ±8kV Non-contact electric discharge ±15kV Conditions: 150pF, 330ohm

[Result evaluation criteria]

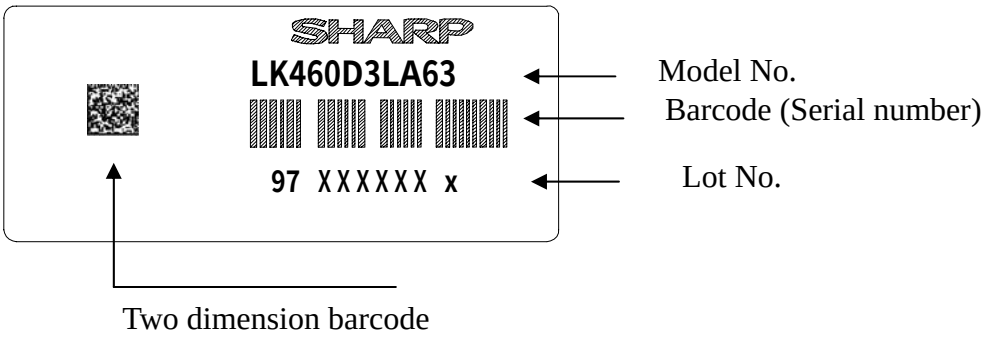
Under the display quality test condition with normal operation state, there shall be no change, which may affect practical display function.

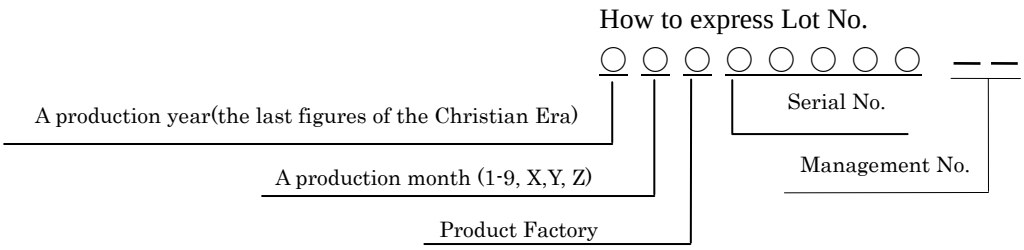
*For Shock test and Vibration test, the method of fixation is not guaranteed excluding the method written in the attached document: " The reliability test form (shock test & vibration test)"

13 Others

The label that displays SHARP, product model (LK460D3LA63), a product number is stuck on the back of the module.

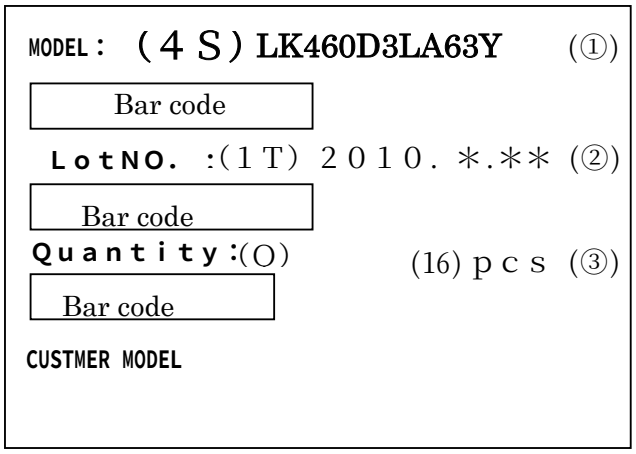
【LK460D3LA63】





2) Packing Label

[LK460D3LA63]



① Management No
② Lot No. (Date)
③ Quantity

3) Adjusting volume has been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.

4) Disassembling the module can cause permanent damage and should be strictly avoided.

5) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.

6) The chemical compound, which causes the destruction of ozone layer, is not being used.

7) When any question or issue occurs, it shall be solved by mutual discussion.

8) This module is corresponded to RoHS.

9) Rust on the module is not taken up a problem

14 Carton storage condition

Temperature	0°C to 40°C
Humidity	95%RH or less
Reference condition	: 20°C to 35°C, 85%RH or less (summer) : 5°C to 15°C, 85%RH or less (winter) the total storage time (40°C,95%RH) : 240H or less
Sunlight	Be sure to shelter a product from the direct sunlight.
Atmosphere	Harmful gas, such as acid and alkali which bites electronic components and/or wires must not be detected.
Notes	Be sure to put cartons on palette or base, don't put it on floor, and store them with removing from wall Please take care of ventilation in storehouse and around cartons, and control changing temperature is within limits of natural environment
Storage life	1 year
