- (b) Wet-bulb temperature should be 39 °C Max.
- (c) No condensation.

Note (2) Thermal management should be considered in final product design to prevent the surface temperature of display area from being over 65 °C. The range of operating temperature may degrade in case of improper thermal management in final product design.

Note (3) 11 ms, half sine wave, 1 time for $\pm X$, $\pm Y$, $\pm Z$.

Note (4) 10 ~ 200 Hz, 30 min, 1 time each X, Y, Z.

Note (5) At testing Vibration and Shock, the fixture in holding the module has to be hard and rigid enough so that the module would not be twisted or bent by the fixture.

**2.2 PACKAGE STORAGE**

When storing modules as spares for a long time, the following precaution is necessary.

- (a) Do not leave the module in high temperature, and high humidity for a long time, It is highly recommended to store the module with temperature from 0 to 35 °C at normal humidity without condensation.
- (b) The module shall be stroed in dark place. Do not store the TFT-LCD module in direct sunlight or fluorescent light.

6.4 POWER ON/OFF SEQUENCE

($T_a = 25 \pm 2^\circ\text{C}$)

To prevent a latch-up or DC operation of LCD module, the power on/off sequence should be as the diagram below.

群創光電股份有限公司

PRODUCT SPECIFICATION

- Note (1) The supply voltage of the external system for the module input should follow the definition of Vcc.
- Note (2) Apply the LED voltage within the LCD operation range. When the backlight turns on before the LCD operation or the LCD turns off before the backlight turns off, the display may momentarily become abnormal screen.
- Note (3) In case of Vcc is in off level, please keep the level of input signals on the low or high impedance. If $T_2 < 0$, that maybe cause electrical overstress failure.
- Note (4) T4 should be measured after the module has been fully discharged between power off and on period.
- Note (5) Interface signal shall not be kept at high impedance when the power is on.
- Note (6) Vcc must decay smoothly when power-off.
- Note (7) $T_5 > (T_{13} + T_{14})$
- Note (8) T16, V-by-One signals shall be stabilized and follows timing specification which defined by section 6.1 & 6.2.

		θ _x -		80	89	-			
	Vertical	θ _y +		80	89	-			
		θ _y -		80	89	-			

Note (1) Definition of Viewing Angle (θ_x , θ_y) :

Viewing angles are measured by Conoscope Cono-80 (or Eldim EZ-Contrast 160R)

Note (2) Definition of Contrast Ratio (CR) :

The contrast ratio can be calculated by the following expression.

$$\text{Contrast Ratio (CR)} = \frac{\text{Surface Luminance of L1023}}{\text{Surface Luminance of L0}}$$

L1023: Luminance of gray level 1023

L0: Luminance of gray level 0

CR = CR (X), where CR (X) is corresponding to the Contrast Ratio of the point X at the figure in Note (6).

Note (3) Definition of Gray-to-Gray Switching Time (VA Model) :

Optical Response

The driving signal means the signal of gray level 0, 124, 252, 380, 508, 636, 764, 892 and 1023.

Gray to gray average time means the average switching time of gray level 0, 124, 252, 380, 508, 636, 764, 892 and 1023 to

each other.

Note (4) Definition of Luminance of White (L_c) :

Measure the luminance of gray level 1023 at center point.

$L_c = L(5)$, where $L(x)$ is corresponding to the luminance of the point X at the figure in Note (6).

Note (5) Definition of Cross Talk (CT) : (VA Model)

$$CT = |Y_B - Y_A| / Y_A \times 100 (\%)$$

Where :

Y_A = Luminance of measured location without gray level 1023 pattern (cd/m²)

Y_B = Luminance of measured location with gray level 1023 pattern (cd/m²)

Note (6) Definition of White Variation (δW) :

Measure the luminance of gray level 1023 at 5 points

$$\delta W = \frac{\text{Maximum } [L(1), L(2), L(3), L(4), L(5)]}{\text{Minimum } [L(1), L(2), L(3), L(4), L(5)]}$$

8. PRECAUTIONS

8.1 ASSEMBLY AND HANDLING PRECAUTIONS

- [1] Do not apply rough force such as bending or twisting to the module during assembly.
- [2] Do not apply pressure or impulse to the module to prevent the damage of LCD panel and Backlight.
- [3] Bezel of Set can not press or touch the panel surface. It will make light leakage or scrape.
- [4] It should be attached to the system firmly using all mounting holes.
- [5] It is recommended to assemble or to install a module into the user's system in clean working areas. The dust and oil may cause electrical short or worsen the polarizer, do not press or scratch the surface harder than a HB pencil lead.
- [6] Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- [7] Protection film for polarizer on the module should be slowly peeled off just before use so that the electrostatic charge can be minimized.
- [8] Do not disassemble the module.
- [9] Always follow the correct power-on sequence when the LCD module is turned on. This can prevent the damage and latch-up of the CMOS LSI chips.
- [10] Do not plug in or pull out the I/F connector while the module is in operation, pins of I/F connector should not be touched directly with bare hands. Do not adjust the variable resistor located on the module.
- [11] Use a soft dry cloth without chemicals for cleaning, because the surface of polarizer is very soft and easily scratched. Water, IPA (Isopropyl Alcohol) or Hexane are desirable cleaners. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- [12] Moisture can easily penetrate into LCD module and may cause the damage during operation.
- [13] When storing modules as spares for a long time, the following precaution is necessary.
 - [13.1] Do not leave the module in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0 to 35°C at normal humidity (under 70%) without condensation.
 - [13.2] The module shall be stored in dark place. Do not store the TFT-LCD module in direct sunlight or fluorescent light.
- [14] When ambient temperature is lower than 10°C, the display quality might be reduced. For example, the response time will become slow, and the starting voltage of LED will be higher than that of room temperature.

8.2 SAFETY PRECAUTIONS

To optimize PID module's lifetime and functions, operating conditions should be followed as below

- [1] Normal operating condition
 - [1.1] Temperature : 20±15°C
 - [1.2] Humidity : 55±20%
 - [1.3] Well-ventilated place is suggested to set up PID module and system.
 - [1.4] Display pattern : regular switched patterns or moving pictures.

群創光電股份有限公司

PRODUCT SPECIFICATION

- [1.4.1] Periodical power-off or screen saver is needed after long-term static display.
- [1.4.2] Moving picture or black pattern is strongly recommended for screen saver.
- [2] Operating requirements of PID modules and systems to prevent uneven display under long-term operating.
 - [2.1] PID suitable operating time : under 20 hrs a day.
 - [2.2] Periodical display contents should be changed from static image to moving picture.
 - [2.2.1] Different background and image colors changed respectively, and changed colors periodically.
 - [2.2.2] Background and image with large different luminance displayed at the same time should be avoided.
- [3] The startup voltage of a Backlight may cause an electrical shock while assembling with the converter. Do not disassemble the module or insert anything into the Backlight unit.
- [4] Do not connect or disconnect the module in the "Power On" condition.
- [5] Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature...) Otherwise the module may be damaged.
- [6] If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- [7] Module should be turned clockwise (regular front view perspective) when used in portrait mode.
- [8] Ultra-violet ray filter is necessary for outdoor operation.
- [9] Only when PID module is operated under right operating conditions, lifetime in this spec can be guaranteed.

After the module's end of life, it is not harmful in case of normal operation and storage.

8.3 SAFETY STANDARDS

The LCD module should be certified with safety regulations as follows:
